ADDITIONAL MATERIALS
In addition to this examination paper, you will need one 12 page answer book.

INSTRUCTIONS TO CANDIDATES
Use black ink or black ball-point pen.
Answer all questions.
Write your answers in the separate answer book provided.
Write your name, centre number and candidate number in the spaces at the top of the answer book.

INFORMATION FOR CANDIDATES
Each question carries 25 marks.
The number of marks is given in brackets at the end of each question or part-question.
You are reminded that assessment will take into account the quality of written communication used in your answers.

THIS PAPER REQUIRES THAT YOU MAKE THE FULLEST POSSIBLE USE OF APPROPRIATE EXAMPLES IN SUPPORT OF YOUR ANSWERS. SKETCH-MAPS AND DIAGRAMS SHOULD BE INCLUDED WHERE RELEVANT.
G1 – CHANGING PHYSICAL ENVIRONMENTS

Answer all questions.

Make the fullest possible use of examples in support of your answers.

Figure 1a: Temperature deviations from the mean in the USA, March 2012

Source: adapted from http://www.ncdc.noaa.gov
1. (a) Describe the pattern of temperature deviations shown in Figure 1a. [5]

(b) Outline the effects on human activities of one or more extreme weather events. [10]

(c) Discuss the success of strategies used by pressure groups and/or individuals to address climate change. [10]

**Indicators**
- **Deaths**
- **Homeless**
- **Buildings uninhabitable**
- **Injured**

A loss score is a measure of the overall impact of an earthquake which takes into account the relative importance of different indicators.

A score of 1 shows the greatest disaster impact and a score of 0 the least.

Source: adapted from http://earthquake-report.com
2.  

(a) Compare the loss scores from earthquakes shown in Figure 2.  

(b) Outline the tectonic processes operating at constructive plate margins and conservative plate margins.  

(c) Outline the social and economic impacts of one or more tectonic events.
Figure 3: Computer model of flood risk of the River Wansbeck, Northumberland

Figure 3a: Recurrence interval 5–25 years

Discharge: 150–225 m$^3$/s
Rainfall intensity: 3–4.5 mm/hr

Figure 3b: Recurrence interval 40–50 years

Discharge: 270–300 m$^3$/s
Rainfall intensity: 5.5–6.5 mm/hr

Figure 3c: Recurrence interval 75–137 years

Discharge: 325–345 m$^3$/s
Rainfall intensity: 7–7.5 mm/hr

Source: http://www.morpethfloodaction.org.uk
3. (a) Describe the variations in flood risk shown in Figure 3. [7]

(b) Describe how you would collect information on people's views of the economic impacts of flooding. [8]

(c) Discuss the strengths and weaknesses of two methods used to present information for an investigation into a changing physical environment that you have completed. [10]

You should state clearly the question that you have investigated.
