INSTRUCTIONS TO CANDIDATES

Use black ink, black ball-point pen or your usual method.

Write your name, centre number and candidate number in the spaces provided on the front cover.

Write your answers in the spaces provided in this booklet.

In Section A, answer EITHER questions 1 and 2 OR questions 3 and 4.

Answer ALL questions in Section B.

If additional space is required you should use the continuation pages at the end of this booklet. The question number(s) should be clearly shown.
INFORMATION FOR CANDIDATES

The number of marks is given in brackets [ ] at the end of each question or part-question; you are advised to divide your time accordingly.

This paper requires that you make as full use as possible of appropriate examples and reference to data to support your answers. Sketch maps and diagrams should be included where relevant.

A plain page is available at the end of the section for you to add any relevant sketch maps and diagrams you may wish to include.

SECTION A: CHANGING LANDSCAPES

Answer EITHER questions 1 and 2 OR questions 3 and 4 from your chosen landscape.

Make the fullest possible use of examples and data to support your answers.

COASTAL LANDSCAPES

Answer questions 1 and 2 if this is your chosen landscape.

1(a) (i) Use FIGURE 1 opposite to suggest how mass movement is influencing the development of this coastal landscape. [5]
1(a) (ii) Explain why wave fetch may affect the erosion of this coastal landscape. [3]
1(b) Explain why wind is important in the formation of coastal sand dunes. [8]
2(a) (i) Use FIGURE 2 opposite to describe variations in the percentage of properties at risk from coastal erosion and flooding.
2(a) (ii) Suggest ONE social loss associated with coastal erosion. [3]
2(b) Examine the success of ONE management strategy used to manage the impacts of coastal processes on human activity. [8]

Photographer: David Flett
GLACIATED LANDSCAPES

Answer questions 3 and 4 if this is your chosen landscape.

3(a) (i) Use FIGURE 3 opposite to suggest how this glacial landscape has been modified since the ice retreated. [5]
Suggest ONE way in which ice thickness could have affected glacial erosion in this landscape. [3]
3(b) Compare TWO processes of glacial erosion. [8]
4(a)  (i) Use FIGURE 4 opposite to describe the trends in the global glacial budget. [5]
4(a) (ii) Explain why there are seasonal variations in ablation within the glacial budget. [3]
4(b) Examine the formation and characteristics of ONE fluvial-glacial landform. [8]
SECTION B: TECTONIC HAZARDS

Answer ALL questions.

Make the fullest possible use of examples and data to support your answers.

5(a)  (i)  Use FIGURE 5 opposite to describe the distribution of high and very high earthquake hazard risk in South East Asia.  [5]
5(a) (ii) Examine the relationship between the location of tectonic margins and the level of earthquake hazard risk in South East Asia.

[9]
5(b) Outline how earthquakes produce (i) liquefaction and (ii) landslides. [8]

6(a)  

(i) Identify the mode for the dead and missing people.  [1]

Mode: 

(ii) Calculate the interquartile range for the dead and missing people. Show your workings.  [4]

Interquartile Range: 

6(b) Suggest possible reasons why there is a variation in the number of destroyed buildings between the selected municipalities of Bohol shown in FIGURE 6a opposite page 30. [10]
6(c) Use FIGURE 6a opposite page 30 and FIGURES 6b to 6d opposite to suggest how the earthquake could have impacted on the economy of Bohol. [9]
7(a) Suggest why explosive volcanic eruptions are often the most hazardous. [8]
7(b) Outline ONE OR MORE short-term response(s) to the effects of volcanic hazards. [10]
FOR CONTINUATION ONLY.

Other impacts of the 2013 earthquake

In 2013 over 389,000 tourists travelled to Bohol. Among the tourist attractions are a number of very old churches, dating back to the early years of the Spanish colonisation of the island.
